

## Minutes of Campus Safety Committee Meeting of June 19, 2013

**Present:** Phil Bidwell, Mary Lynn Bensen, Matt Reiss, Tom Rathbone, Hilgrove Delancy, Norm Payne, Scott Barton, Mike Kinsella, Rick Roberts, Julie Young, Dan Chambers, Ron Bishop, Dale Couse, Karen Brown, Chris Whiteman.

**Location:** Alumni Hall

**Lost-time injuries:** Construction dust intrusion for two individuals in UPD. Back strain for a maintenance individual in Wilber involved in moving a wardrobe.

**Alumni Dust Intrusion:** The mechanical equipment (two rooms, one by Little Theater, one by UPD) is up for removal. Testing standardized for lead, asbestos, and PCB. "Scope creep" on a pipe relocation resulted in generation of a significant amount of dust after abatement had occurred. Pre-construction testing showed miscellaneous building materials such as non-asbestos gypsum and plaster content. HEPA cleaning was done by CF contractors and air samples showed clean under electron microscopy for fibers. Some relocation of staff revealed some vulnerabilities. Department of Labor recommended that the vermiculite in the fireproofing be tested (some vermiculite in the industry comes from one mine in Montana and contains tremolite which is related to asbestos – so all vermiculite is considered suspect to err on the side of caution). There was one fitting that required abatement plus a few others nearby– within containment the levels are below minimums and outside are zero. Follow ups are planned to review communications and procedures. Even respirable nuisance dust was below OSHA limits. DOL was here twice, in two different capacities, and they are satisfied with process. We are also looking at the technical issues involved with relocating UPD in terms of Disaster Recover Planning.

**Milne Shelving Collapse:** Annual review and inspection was completed last week, which revealed about a dozen or so points of concern, which Carpentry has addressed.

**Fire Inspection:** Final report has one open item. Justin will return 1 September for follow-up.

**Outlet testing / repair:** Testing one building per week. No issues for discussion.

**Science 1 / Bacon crosswalk:** Bids awarded for an LED lamp to illuminate the crosswalk and removal of two parking spaces on the north side of the street. Changing the parking layout to a 30 degree slant improves sight lines but results in the loss of seven stalls.

**OSHA:** Jonathan Haney was here for an ergonomics update at the library – evaluated the results of new chairs, keyboards, mice etc. Much improvement was noted, both in the physical and morale. Expansion of the program will be considered. The Metal/Paint/Carpentry shops were reviewed for industrial hygiene. There were a few recommendations there to follow up on. The matter of Arc Flash hazard was reviewed but we don't work on live panels so it is really not that much of a hazard.

**Tabletop Exercise:** Held an exercise and an Emergency Operations Center test. Scenario was at the Bugbee Children's Center and EOC at Hunt Union.
